Why are you called coronavirus?

Before Reading

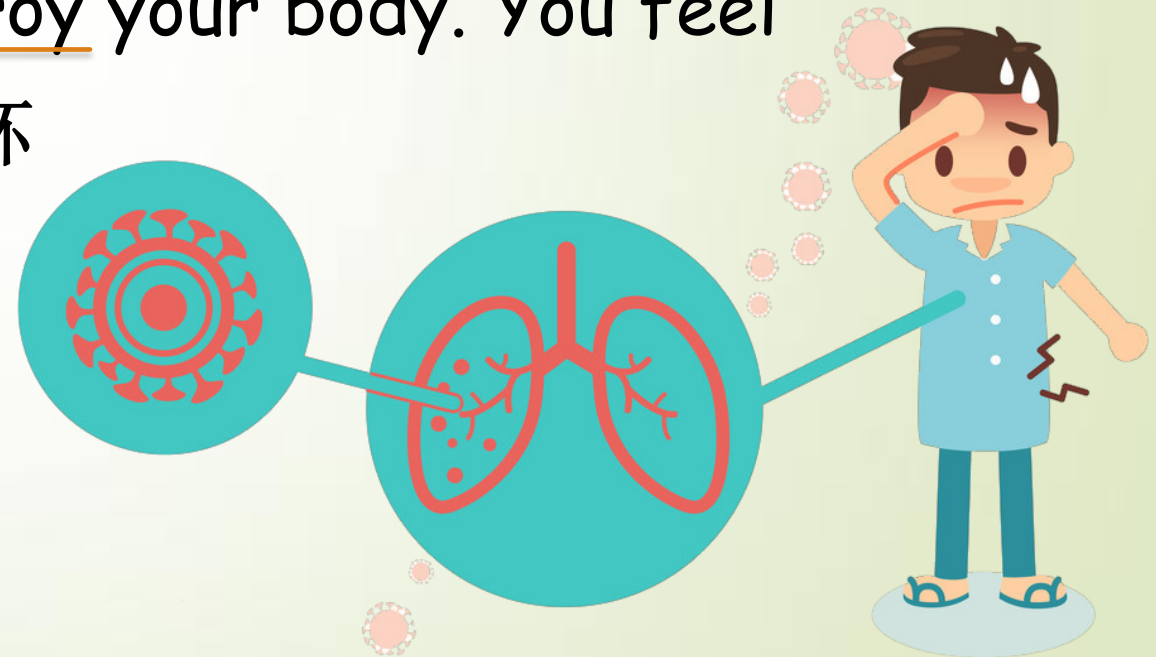

We are a kind of virus. We look like a flower or a crown. People call us coronavirus.

Why do you make people sick?

Just like humans, we also have babies to make our family bigger and bigger. We do this in your body. When we have our babies, we destroy your body. You feel sick.

破坏

How do you move from one person to another?

1. The answer is in droplets that come from your nose and mouth. When you sneeze or cough in front of someone, we come out from your body and go into the other person's body.
2. We can also stay on your skin for a while. When you touch your mouth, nose and eyes with your hands, we can also go into your body.
3. Be careful, we can stay in the air for a while.

How do you move from one person to another?

1. The answer is in droplets^{飞沫} that come from your nose and mouth. When you sneeze or cough in front of someone, we come out from your body and go into the other person's body. 打喷嚏或咳嗽

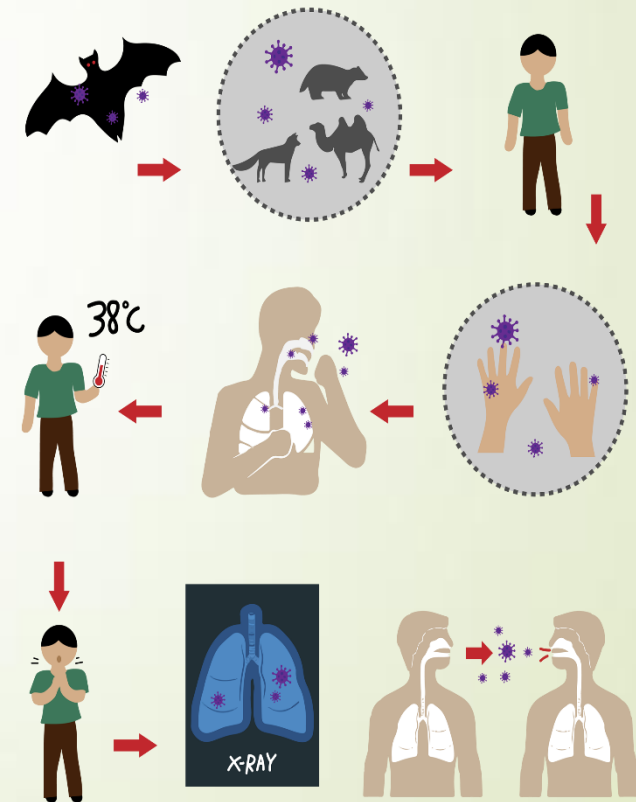

2. We can also stay on your skin for a while. When you touch your mouth, nose and eyes with your hands, we can also go into your body.

3. Be careful, we can stay in the air for a while.

Question time

1. When does the virus come out from your body?
2. Where can the virus stay?

Question time

1. When does the virus come out from your body?

When you sneeze or cough in front of someone.

2. Where can the virus stay?

The virus can stay on your skin and in the air for a while.

What are you most afraid of? Let's read!

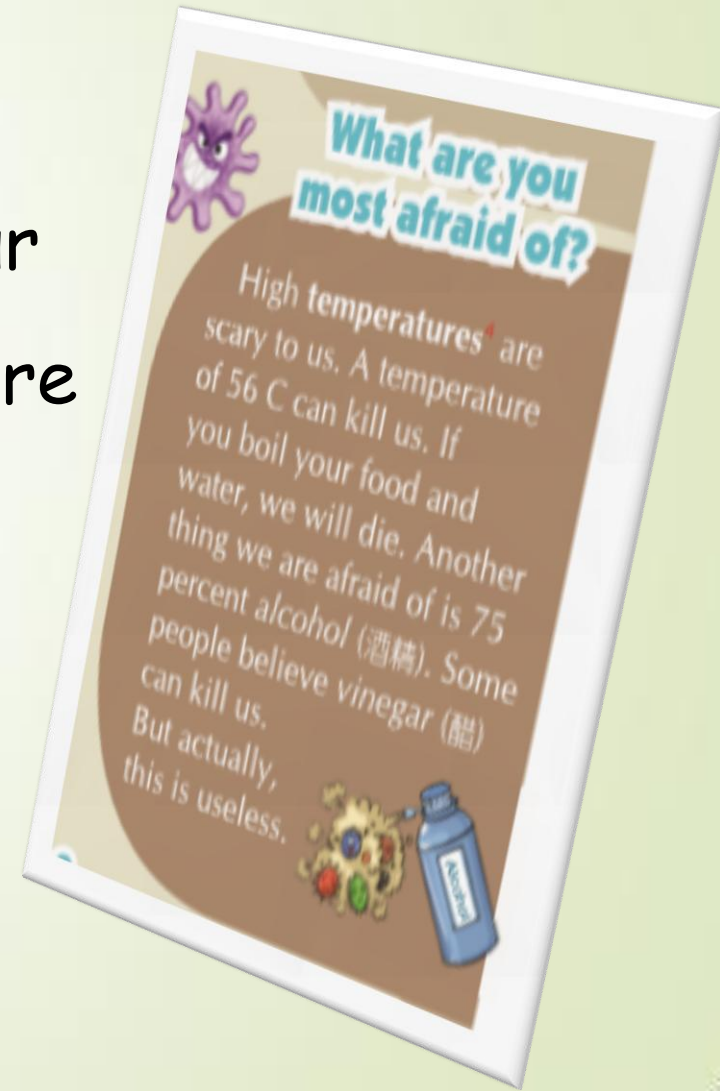

温度

令人害怕

High temperatures are scary to us. A temperature of 56°C can kill us. If you boil your food and water, we will die. Another thing we are afraid of is 75 percent alcohol. Some people believe vinegar can kill us. But actually, this is useless.

Homework:

Design a poster about the virus. In you poster, you can tell people what can do, and what can't do. You may ask your parents for help.
